

Loc Tran Xuan

Data Engineer

📍 Ho Chi Minh City ✉ xuanloc2018@gmail.com ☎ 0976248973 in Loc Tran 🌐 Loc Tran

EDUCATION

The Bachelor of Science, *University of Science*

11/2018

- **GPA:** 8.86/10
- **Achievement:**
 - Published two papers on ACIIDS 2022 and KSEM 2022
 - Encouraging scholarships: 2018, 2019, 2022
 - Academic and scientific research merit scholarship: 2022

WORK EXPERIENCE

Research Assistant,

06/2021 – 06/2022

Computer Science Laboratory, HCMUS

- **Responsibilities:**
 - Design and implement novel Deep Learning models to solve the link prediction problem on knowledge graphs.
 - Evaluate the performance of various link prediction models on different benchmark datasets, and analyze the experimental results.
 - Develop and implement algorithms for embedding entities and relations into vector space, which is a crucial component of link prediction models.
 - Conduct thorough literature reviews to stay up-to-date with the latest research in the field of link prediction on knowledge graphs.
 - Collaborate with other researchers in the laboratory to exchange ideas and knowledge, and to work on joint research projects.
 - Write research papers and present research findings at 2 Southeast Asian conferences.
 - Participate in teaching and mentoring activities for undergraduate and graduate students, such as teaching courses on machine learning and data mining, and supervising research projects.
- **Technologies:** Pytorch, GCNs, GAT, CNNs, Geometric space, Knowledge Graph.

Data Engineer, *Yody Fashion Tech, YODY*

06/2022 – 05/2023

- **Responsibilities:**
 - Develop and maintain data pipelines that extract data from different sources (MySQL, Postgres DB, other third parties) using Nifi, transform data using Spark, and load data into a datalake HDFS, then save it into a data warehouse.
 - Implemented and maintained data marts based on a variant table of the snowflake schema using technology such as SQL, Python, and ETL tools to meet the specific requirements of data analysts. Successfully optimized data marts to reduce query execution time by up to 50%, resulting in improved reporting and decision-making capabilities for the organization.
 - Implemented a highly scalable data pipeline using Apache Kafka and Apache Flink to process real-time Point of Sale (POS) data for Inventory, Human Resources, and Sales reports. Achieved a significant reduction in data processing time and improved data accuracy by integrating data validation and cleansing techniques.
 - Collaborated effectively with cross-functional Backend (BE) and Frontend (FE) teams to identify requirements. Communicated effectively with team members and stakeholders to ensure the successful implementation and delivery of the project.
- **Technologies:** Spark, Nifi, HDFS, BI tools, Python, Java, GCP, Flink.

TECHNIQUE SKILLS

Have a basic knowledge about:

- Data Structure.
- Machine Learning and Deep Learning.

Working with data lake and data warehouse

- HDFS, MySQL, Postgres

Ingesting data using Nifi

Has experience in working with GCP

Programming languages

- Python, C++, Bash script

Perform other EDA and build up a end-to-end data pipeline

ETL Batch data with Spark and Streaming data with Flink

Has experience in designing data flow and data pipeline for constructing data mart and data model

SOFT SKILLS

- | | | |
|----------------------|------------------------------------------------|-------------------|
| - Good Communication | - Problem solving | - Time management |
| - Teamwork | - Have ability to explore and research problem | - Leadership |
